

# Let's enjoy izu peninsula geopark!

Approximately 20 million years ago, an undersea volcano erupted near Iwo Jima, far south of Japan. As it moved north, it continued to erupt and rise, and about 600,000 years ago it collided with the Japanese archipelago.

## For example

### 【Ebisu Island】

Beautiful geological formations created by an undersea volcano.

### 【Tsumekizaki Park】

Impressive columnar joints created by the forces of nature.
